

SUMMARY

Junior Machine Learning Engineer with a CS Bachelor's and a Master's in Information Systems, eager to learn and ship models to production under mentorship. Strong in Python (NumPy, Pandas, scikit-learn) with hands-on experience in data preprocessing, feature engineering, model evaluation, and exploratory data analysis, plus a solid grounding in ML fundamentals regression, classification, and evaluation metrics. Comfortable querying with SQL, working in Jupyter notebooks, building and improving ML pipelines, and collaborating through Git, code reviews, and sprints. Brings hands-on LLM and agentic-AI project experience. U.S. citizen.

EDUCATION

Master of Science in Information Systems , Northeastern University	May 2026
Bachelor of Engineering in Computer Science , RNS Institute of Technology	Jun 2023

CORE SKILLS

Machine Learning: ML fundamentals (regression, classification, evaluation metrics); building and iterating on models; feature engineering; model evaluation; scikit-learn; deep learning framework — PyTorch / TensorFlow (familiarity)

Python & Analysis: Python (NumPy, Pandas, scikit-learn); clean, well-tested code; data preprocessing; exploratory data analysis (EDA); Jupyter notebooks

Experiments: A/B and offline experiments (familiarity); experimental design; documenting and presenting findings

ML Pipelines & Data: Maintaining and improving ML pipelines; bug fixing and performance optimization; SQL querying; accessing, cleaning, and transforming training data

LLMs & Agentic AI: LLMs, RAG, prompt engineering; agentic pipelines; evaluation of model outputs; LangChain / LangGraph; OpenAI / Claude APIs

Engineering & Cloud: Git and collaborative workflows; code reviews, sprint ceremonies; AWS (GCP, Azure — exposure); Docker; CI/CD; experiment tracking (MLflow, Weights & Biases — interest)

EXPERIENCE

Chainwise CPA — ML Engineer Intern <i>Boston, MA</i>	Aug 2025 – Dec 2025
--	---------------------

- Built and iterated on Python ML models over 50K+ records/day with clean, well-tested code for data preprocessing, feature engineering, and model evaluation, improving accuracy 35% over baseline.
- Conducted exploratory data analysis to surface insights and data-quality issues that informed modeling.
- Maintained and improved ML pipelines, fixing bugs and optimizing performance, and deployed with CI/CD and monitoring.
- Collaborated through Git code reviews and sprint ceremonies and built LLM and agentic-AI workflows as a differentiator.

Northeastern University — Research Assistant, Applied ML <i>Boston, MA</i>	Jan 2025 – Apr 2025
--	---------------------

- Built ML experimentation infrastructure over 500K+ records with feature engineering, model evaluation, and EDA.
- Ran offline experiments and benchmarking, improving evaluation reliability 40%, and documented and presented findings.
- Worked under guidance on open-ended ML problems and took ownership of methodology and documentation.
- Learned new ML tools and frameworks quickly and grew under mentorship.

Dhanyath Technologies — Software & Data Engineering Intern <i>Bangalore, India</i>	Dec 2023 – Jul 2024
--	---------------------

- Built Python pipelines over 100K+ records/day, accessing, cleaning, and transforming training data with SQL.
- Reduced latency 40% through optimization and profiling and maintained automated workflows with Git and CI/CD.
- Collaborated with data engineers to deliver reliable, ML-ready data.
- Participated in code reviews and sprint ceremonies and adapted to evolving priorities.

PROJECTS

ReviewPulse — ML & Agentic AI Platform (MS Capstone; public GitHub) <i>Python (NumPy, Pandas, scikit-learn), LLMs, RAG, LangChain, OpenAI / Claude APIs, SQL, AWS, Docker, GitHub Actions</i>	Jan 2026 – Apr 2026
---	---------------------

- Built ML models and agentic, LLM-powered workflows with EDA, feature engineering, and model evaluation across multiple sources.
- Maintained ML pipelines with clean, well-tested code, CI/CD, and monitoring, and presented findings.
- Applied prompt engineering and evaluation of model outputs and documented the system on public GitHub.
- Iterated on models with offline experiments and validated outputs before integration.
