SUMMARY

Early-career AI Engineer with a Master's in Information Systems and a CS Bachelor's, building, deploying, and maintaining machine learning and Generative AI solutions in production using Python. Hands-on across both traditional ML (predictive modeling, classification, forecasting) and GenAI (RAG, summarization, document processing, automation), building ML / GenAI pipelines — data preparation, feature engineering, model training, and evaluation — developing APIs that integrate AI into business workflows, and following MLOps / LLMOps practices including version control, testing, documentation, and monitoring for accuracy, drift, and reliability. Collaborates across engineering, data, and business teams; a quick learner eager to stay current with emerging AI, engineering, and cloud trends, with a commitment to responsible and secure AI.

EDUCATION

Master of Science in Information Systems, Northeastern University

May 2026

Bachelor of Engineering in Computer Science, RNS Institute of Technology

Jun 2023

CORE SKILLS

Languages: Python (strong), SQL, Java, Bash

Machine Learning: Supervised and unsupervised learning, predictive modeling, classification, forecasting, feature engineering, model evaluation; PyTorch, scikit-learn

Generative AI & LLMs: LLMs, prompt engineering, embeddings, RAG, summarization, document processing, automation, agentic workflows; OpenAI / Anthropic Claude APIs

ML / GenAI Pipelines & MLOps / LLMOps: Data preparation, feature engineering, model training and evaluation, model deployment, version control, testing, documentation

Monitoring & Observability: Model performance monitoring (accuracy, drift, reliability), logging, dashboards, alerts

APIs & Integration: REST API design and integration, FastAPI, integrating AI solutions into business workflows

Cloud & DevOps: AWS (S3, EC2, Lambda), Docker, Git, CI/CD (GitHub Actions); Azure (exposure)

Collaboration & Responsible AI: Cross-functional teamwork (engineering, data, business), communication, documentation, interest in responsible and secure AI

EXPERIENCE

Chainwise CPA

Aug 2025 – Dec 2025

AI / ML Engineer Intern

Boston, MA

- Built and deployed ML and GenAI / LLM solutions in production on AWS across **50K+** records/day, improving performance **35%** over baseline and automating manual workflows.
- Built data preparation, feature engineering, training, and evaluation stages; developed APIs to integrate models into business workflows.
- Monitored model performance (accuracy, reliability) and troubleshoot issues; followed version control, testing, and documentation practices.
- Collaborated with cross-functional partners and communicated outcomes to non-technical stakeholders.

Northeastern University

Jan 2025 – Apr 2025

Research Assistant, Applied AI

Boston, MA

- Built, trained, and evaluated ML/AI models on **500K+** records with feature engineering and structured experiment tracking.
- Improved evaluation reliability **40%**; monitored model performance and drift across iterations.
- Documented methods and communicated findings to technical and non-technical audiences.

Dhanyath Technologies

Dec 2023 – Jul 2024

Data & Software Engineering Intern

Bangalore, India

- Built and deployed data pipelines (Spark / SparkSQL) processing **100K+** records/day and developed REST APIs for downstream use.
- Reduced latency **40%** through optimization and cut release errors **30%** with testing, version control, and CI/CD in an Agile team.
- Partnered cross-functionally to operationalize solutions and maintain documentation.

PROJECTS

ReviewPulse — ML & Generative AI Platform (Capstone)

Jan 2026 – Apr 2026

Python, FastAPI, LangChain, ChromaDB, OpenAI / Claude / Gemini APIs, RAG, embeddings, PyTorch, Docker, AWS, GitHub Actions, pytest

- Built and deployed GenAI solutions over **5** data sources — RAG, summarization, document processing, and automation — alongside predictive ML models, served through a production FastAPI service.
- Built ML / GenAI pipelines (data prep, feature engineering, training, evaluation) and followed MLOps / LLMOps practices: version control, testing, CI/CD, and documentation.
- Implemented model evaluation and performance monitoring (LLM-as-judge, eval harnesses, drift checks) with logging for reliability on AWS with Docker.
